Custom Feature

For our project 2, we added a custom feature that allowed each player to choose their own character to play as. We plan to have this feature added mainly to the front of our game, where each player can choose which character they would like to be before they start the game. This image of the character will show up whenever its players turn. For example, when it is player 1 turn their character will show up on the top of the screen and the same for player two.
